

CO₂ Responsible Certificate

Presented to:

Phil Communications

For taking the next step in environmental responsibility and offsetting:

8 tonnes of CO₂

Equivalent to 45 trees planted

These carbon offsets directly support farmers in Nicaragua that grow trees on their farms to mitigate climate change, improve livelihoods and restore ecosystems.

[Meet the farmers at: Takingroot.org trace code TR2018](https://www.takingroot.org/trace/code/TR2018)

Thank you for your support! With your help, Taking Root is redefining the economics of tropical reforestation by making it profitable for farmers to grow trees. This is achieved by providing them with direct cash payments and connecting them to markets for sustainably produced timber and shade grown coffee. Through this model, we have channelled millions of dollars to communities living on less than \$2/day, created thousands of jobs and have incentivized the planting of millions of trees.
